EDENBRIDGE GRAMMAR
BEYOND SCHOOLING

Edenbridge Grammar School

Assessment, Progress & Flourishing Policy

---

1. Purpose of Assessment

Assessment at Edenbridge Grammar is a structured, continuous process designed to support mastery, intellectual depth, applied competence, and human flourishing. It is not a periodic event, nor a narrow grading exercise. It is the mechanism through which learning becomes visible, measurable, and improvable.

Assessment enables teachers to understand where each learner is positioned within the curriculum, how securely knowledge has been embedded, how effectively it is being applied, and where support or extension is required. It enables students to take ownership of their growth. It enables leadership to ensure rigour and coherence across the school.

Every assessment decision must ultimately answer three questions:

1. What has the student securely mastered?
2. How effectively can the student apply that knowledge?
3. What is the next appropriate step in their progression?

---

2. What Is Assessed at Edenbridge Grammar

Edenbridge assesses the whole learner. Academic knowledge is essential, but it is not sufficient on its own.

Teachers assess across interconnected domains:

- Subject knowledge and conceptual understanding
- Depth of reasoning and analytical thinking
- Application of knowledge in real-world contexts
- Collaboration and communication

- Initiative, resilience, and leadership
- Ethical reasoning and self-awareness
- Contribution to community and collective work

This ensures that assessment recognises both intellectual achievement and personal development. Teachers must consider evidence across these domains when forming professional judgements.

---

3. Academic Assessment: The Academic Box (Ages 10–20)

Within the Orientation and Direction Phases, all academic tracking is conducted within the Academic Box (ExelTutor system). This is the central platform for curriculum mastery.

The Academic Box:

- Maps student progress against defined curriculum standards
- Tracks completion and depth of subject modules
- Identifies misconceptions and recurring errors
- Records patterns of struggle and perseverance
- Generates insight at individual, cohort, and whole-school level

Teachers are responsible for:

- Reviewing Box analytics weekly
- Identifying students requiring intervention or extension
- Interpreting AI-generated insights professionally
- Ensuring that data reflects genuine understanding

The AI system may identify patterns, but teachers determine instructional response. No automated allocation of attainment replaces teacher judgement.

Parents and students have structured access to progress dashboards. Transparency strengthens accountability and partnership.

---

4. Ongoing Formative Assessment

Assessment is embedded daily within teaching practice.

Teachers assess continuously through:

- Targeted questioning
- Observation of task engagement
- Review of written and verbal responses
- Supervision and mentorship dialogue
- Monitoring of collaborative interactions
- Reflection activities

Weekly review meetings within departments or phases should include discussion of:

- Students showing stagnation
- Students demonstrating accelerated progress
- Emerging skill gaps
- Patterns identified within the Academic Box

Formative assessment is responsive. If a concept is insecure, teaching adapts. If mastery is demonstrated, challenge increases.

---

5. Early Years Assessment: Foundation & Formation

Assessment in the Foundation and Formation phases is developmental, observational, and narrative-based.

Teachers gather structured evidence through:

- Observational notes
- Annotated photographs
- Floor books documenting project journeys
- Work samples and creative artefacts

- Recorded dialogue and questioning
- Collaborative project documentation

Assessment focuses on growth in:

- Communication and language
- Early literacy and numeracy
- Curiosity and inquiry
- Social development
- Emotional regulation
- Physical coordination

Teachers are responsible for curating portfolios that demonstrate progression over time. These portfolios form the basis of parent communication and planning adjustments.

Territory Mapping occurs three times per year to establish developmental baselines, review progress, and celebrate growth.

---

6. Learning Hubs, Innovation Hubs & Quest Assessment

Applied learning within Quests and Hubs requires structured evidence validation.

Students must demonstrate how academic skills are used in context. Evidence may include:

- Project plans and execution records
- Presentations (live and digital)
- Dramatic or creative performance
- Community engagement documentation
- Written rationales and research summaries
- Peer collaboration evidence

All substantial artefacts should be uploaded into the XL Quest Box. Teachers review and validate uploaded evidence against curriculum standards and skill indicators.

Assessment within Quests must explicitly consider:

- Application of subject knowledge
- Depth of reasoning
- Quality of collaboration
- Time management and planning
- Reflection and iteration

This ensures that project work is academically rigorous and not merely experiential.

---

7. Territory Mapping & Reflective Cycles

Territory Mapping occurs three times annually across all phases.

During Territory Mapping, students:

- Review Academic Box progression
- Examine accumulated Quest evidence
- Evaluate skill development
- Analyse credit accumulation
- Set structured goals for the next cycle

Teachers facilitate structured mentorship conversations during this process. They must ensure that:

- Goals are specific and measurable
- Students understand their growth trajectory
- Academic and personal development are integrated

This structured reflection strengthens agency and accountability.

---

8. Moderation & Validation of Evidence

Consistency and credibility require systematic moderation.

Stage 1 – AI Curriculum Analysis

AI analyses uploaded evidence and maps it against defined attainment criteria.

Stage 2 – Phase-Level Teacher Validation

Teachers confirm or adjust AI suggestions, ensuring contextual understanding and fairness.

Stage 3 – Cross-Phase Moderation

Samples of anonymised student work are reviewed across age phases to ensure vertical alignment of standards.

Stage 4 – Central Moderation Panel

Senior academic leadership conducts scheduled audits of credit allocations and assessment patterns to ensure equity and institutional coherence.

Moderation meetings must be documented. Decisions must be justified against curriculum criteria.

Credit allocation is automated within the ExelTutor system according to predefined curriculum thresholds. Teachers do not manually assign credits. Their role is to validate evidence authenticity, monitor progression patterns, and initiate intervention where necessary. Leadership maintains oversight through periodic audit of automated credit outputs.

---

9. Data Analytics & Strategic Oversight

The back-office ExelTutor system enables leadership to review:

- Individual pupil progression
- Cohort trends
- Subject-level performance
- Skill development patterns
- School-wide progress indicators

Data is reviewed termly at leadership level. Patterns inform intervention strategies, curriculum refinement, and professional development priorities.

Analytics are used to improve learning — never to rank or publicly compare students.

---

10. Credit Bank System

The Credit Bank records cumulative verified achievement.

Credits are awarded only when:

- Curriculum standards are securely met
- Evidence is validated through moderation
- Applied competence is demonstrated
- Skill benchmarks are satisfied

Credits reflect depth and consistency of achievement, not isolated performance.

Teachers must ensure that credit allocation is evidence-backed and moderation-approved.

---

11. Credit Alignment with Recognised Qualification Frameworks

The Credit Bank aligns structurally with the USA high school credit system to support international comparability.

Each credit corresponds to defined learning hours, curriculum outcomes, and validated achievement within project work.

- AI allocates credits based on validated criteria
- Teachers validate evidence quality, not credit calculation
- Teachers intervene where progress patterns raise concern
- Leadership audits system integrity

As university partnerships formalise, equivalency frameworks will be published. The long-term strategic goal includes curriculum validation with UK higher education institutions and exploration of accredited pathways.

Until formal accreditation is secured, the Credit Bank functions as:

- A structured academic transcript
- A verified evidence record
- A university-facing progression document

---

12. University Progression Pathways

Edenbridge is actively building institutional relationships with universities in the UK, Europe, and Asia.

Students progress through three stages:

1. Foundational mastery
2. Applied depth and specialisation
3. Portfolio consolidation and external validation

Graduates leave with:

- Academic transcript
- Verified credit record
- Evidence portfolio
- Structured references

These components demonstrate readiness for higher education through sustained achievement, not single examinations.

---

13. Feedback & Communication

Feedback must be:

- Clear and developmental
- Strengths-informed
- Forward-focused
- Evidence-based

Teachers provide narrative feedback alongside attainment indicators. Parents receive structured progress updates and access to portfolio evidence.

Feedback conversations should guide improvement and reinforce responsibility.

---

14. Core Principles

Edenbridge Grammar does not:

- Publicly rank students
- Reduce success to examination scores alone
- Separate academic growth from character development

Assessment exists to:

- Strengthen mastery
- Develop resilience
- Encourage intellectual curiosity
- Prepare students for university and life

Every assessment decision must reflect integrity, fairness, and belief in each student's capacity to grow

EDENBRIDGE GRAMMAR
BEYOND SCHOOLING

Assessment in Practice Framework

Teacher Operational Rhythm

Below is the structured rhythm for assessment implementation at Edenbridge Grammar.

🟦 Weekly Responsibilities

Focus Area	Teacher Action	Purpose
Academic Box Review	Review bot progress for at least 5 students (rotational system across class)	Identify stagnation, misconceptions, acceleration
Physical & Project Evidence	Review physical work, project artefacts, and challenge-based outcomes produced that week	Ensure application of academic knowledge is visible
Upload & Validation	Confirm students have uploaded required evidence into XL Quest Box	Maintain continuity of evidence tracking
Observation Cycle	Conduct focused observation on rotating group (approx. 5 students weekly in a class of 20)	Capture qualitative learning behaviours and engagement
Quick Intervention	Speak briefly with students showing concern signals	Early correction before problems escalate

🔁 Over a 4-week period, all students should receive direct progress review attention.

🟩 Monthly Responsibilities

Focus Area	Teacher Action	Purpose
Full Class Academic Sweep	Review entire class Academic Box data	Identify cohort trends and curriculum pacing issues

Progress Categorisation	Identify students who are: On Track / Accelerating / Stagnating	Plan differentiation and support
Evidence Quality Check	Sample student uploads for depth and authenticity	Maintain academic rigour
Phase Discussion	Meet with phase colleagues to discuss patterns and alignment	Strengthen consistency
Parent Communication (if needed)	Flag emerging concerns early	Build partnership

Monthly review ensures that weekly patterns are not ignored.

🟧 Milestone Responsibilities (3x per Year)

Milestones align with Territory Mapping cycles.

Focus Area	Teacher Action	Purpose
Territory Mapping Preparation	Review Academic Box, Quest evidence, skill growth	Prepare structured feedback
Student Reflection Conference	Conduct mentorship-style conversation with each student	Strengthen agency and accountability
Curriculum Position Review	Confirm student alignment with overarching curriculum standards	Prevent drift
Intervention Decisions	Trigger support plans where required	Close progression gaps
Phase Moderation Meeting	Participate in cross-review of selected evidence	Maintain fairness and alignment

Milestones are developmental checkpoints, not grading events.

🔷 What Teachers Are Not Responsible For

To protect clarity:

Teachers are not responsible for:

- Manually calculating credits
- Issuing credit scores
- Managing AI thresholds
- Adjusting backend credit algorithms

AI bots allocate credits based on validated curriculum programming.

Teachers are responsible for:

- Ensuring uploaded evidence reflects authentic work
- Intervening when learning stalls
- Supporting students in reflection and goal-setting
- Maintaining assessment integrity
